

Chalk Block

Originally developed and introduced by Walbuck for the rubber industry, chalk blocks ensure more efficient production during the polishing process versus using a powder. The application during the polishing process causes the rubber to ball and flake off, leaving the surface free of excess material. Blocks are also much more economical in saving time and minimizing waste, and results in a cleaner working environment.

Features & Benefits

- Specially designed for the Rubber Roller Industry
- Walbuck block chalk is a very pure chalk
- It is very soft at 30 shore hardness
- The block is a comfortable size for the operator to hold and use efficiently
