

Expandable Grinding Plugs

Technical Specification

- Each piece is machined .03mm below the actual size of the bore
- Each component is machined as a bespoke item to ensure all tolerances are met
- Our range for these plugs is from 10mm up to 125mm in diameter
- Over 125mm - prices are on application

Features & Benefits

- Our range of expandable grinding plugs are the perfect solution for grinding tube type rollers. The unique design enables extremely close tolerances to be met. When the plug enters into the tube and pressure is applied they expand to form a concentric fit to the roller end. They mimic the fitting of a bearing seated into the same position so you can be sure the ground roller will be true to the bearings that will be fitted by the end user or by the roller manufacturer
